2019-7-1 Manufacturing Science by Ghosh Malik contains information related to Numerical control machine tools and automated systems of production, Advanced statistical methods of quality control, Industrial robots on the factory floor etc. The Manufacturing science is also a very important part in Mechanical engineering.

We are in the midst of the third tectonic social transformation in human history. Our current transition toward greater forms of transnational interconnection, consumption- and finance-driven rather than production-based capitalism, digital information and cultural flows, and the attendant large-scale social and ecological consequences of these are drastically remaking our world, cultural producers from across the globe are seeking to make sense of, and provide insights into, these complex changes. *Imagining Neoliberal Globalization in Contemporary World Fiction* takes a broad cross-cultural approach to analyzing the literature of our increasingly transnationalized world system, considering how its key constituent features and local-level manifestations have been thematized and imaginatively seized upon by literary fiction produced from the perspective of the periphery of the capitalist world system. Textual renderings of globalization are not simply second-order

approximations of it, but constitutive elements of globalization that condition how it will be understood and responded to, and so coming to terms with the narrativizations of globalization is vital scholarly work, as, among other things, it allows us to see to what extent it is currently possible to imagine alternatives to globalization's more baleful aspects. This work will be of interest to students and scholars across a range of areas including contemporary literary/cultural studies, globalization studies, international relations, and international political economy.

For close to 20 years, "Industrial Engineering and Production Management" has been a successful text for students of Mechanical, Production and Industrial Engineering while also being equally helpful for students of other courses including Management. Divided in 5 parts and 52 chapters, the text combines theory with examples to provide in-depth coverage of the subject.

This text/reference represents the first balanced treatment of graphical and analytical methods for kinematic analysis and synthesis of linkages (planar and spatial) and higher-pair mechanisms (cams and gears) in a single-volume format. A significant amount of excellent German literature in the field that previously was not available in English provides extra insight into the subject. Plenty of solved problems and exercise problems are included to sharpen your skills and demonstrate how theory is put into practice.

This book demonstrates the epic genre's enduring relevance to the Global South. It identifies a contemporary avatar of classical epic, the "postcolonial epic", ushered in by Herman Melville's *Moby Dick*, a foundational text of North America, and exemplified by Derek Walcott's Caribbean masterpiece *Omeros* and Amitabh Ghosh's South Asian saga, the *Ibis* trilogy. The work focuses on the epic genre's rich potential to articulate postimperial concerns with

nation and migration across the Global North/South divide. It foregrounds postcolonial developments in the genre including a shift from politics to political economy, subaltern reconfigurations of capitalist and imperial temporalities, and the poststructuralist preoccupation with language and representation. In addition to bringing to light hitherto unexamined North/South affiliations between Melville, Walcott and Ghosh, the book proposes a fresh approach to epic through the comparative concept of 'political epic', where an avowed national politics promoting a culture's 'pure' origins coexists uneasily with a disavowed poetics of intertextual borrowing from 'other' cultures. An important intervention in literary studies, this volume will interest scholars and researchers of postcolonial studies, especially South Asian and Caribbean literature, Global South studies, transnational studies and cultural studies.

This is the revised edition of the book with new chapters to incorporate the latest developments in the field. It contains approx. 200 problems from various competitive examinations (GATE, IES, IAS) have been included. The author does hope that with this, the utility of the book will be further enhanced.

The Book Is Intended To Serve As A Textbook For The Final And Pre-Final Year B.Tech. Students Of Mechanical, Production, Aeronautical And Textile Engineering Disciplines. It Can Be Used Either For A One Or A Two Semester Course. The Book Covers The Main Areas Of Interest In Metal Machining Technology Namely Machining Processes, Machine Tools, Metal Cutting Theory And Cutting Tools. Modern Developments Such As Numerical Control, Computer-Aided Manufacture And Non-Conventional Processes Have Also Been Treated. Separate Chapters Have Been Devoted To The Important Topics Of Machine Tool Vibration, Surface Integrity And Machining Economics. Data On Recommended Cutting Speeds, Feeds And Tool Geometry For
