Project finance is the long-term financing of infrastructure and industrial projects based upon the projected cash flows of the project rather than the balance sheets of its sponsors. Usually, a project financing structure involves a number of equity investors, known as 'sponsors', and a 'syndicate' of banks or other lending institutions that provide loans to the operation.

Since the 1970s, the practice of financing major private and public sector capital-intensive projects has shifted to an ever-greater reliance on private funding sources, as opposed to direct financing through the issuance of corporate or government bonds. In the 1990s, these financing practices have undergone further changes with the increasing globalization of capital markets, the growth of derivative instruments, and the rapid increase in information technology that enhances

cash-management practices. Today's project financing market is increasingly using sophisticated capital market, bank and agency financing mechanisms as well as using derivative instruments for asset and liability management. Thus, financial market innovations are bringing the once separate fields of project financing and international finance more closely together. This is the first book to treat both topics as an interrelated whole, for contemporary project financing cannot be fully understood without a good working knowledge of the international financial markets that have developed the various financing techniques and funding sources being used. The book provides an in-depth description of cross-border project financing as a technique for financing capital-

intensive projects, as well as an overview of certain financing and derivative instruments currently available in the global financial markets. The first part of the book provides an overview of certain funding and derivative instruments currently used in the international financial markets, including a general overview of financial innovations that have occurred in recent decades.

Topics covered include an introduction to the syndicated Euro-credit market; an overview of various marketable debt securities actively used in the international financial markets; an introduction to depositary receipt as an innovative way of raising cross-border equity capital; an elaboration of the derivative instruments most commonly used in the project financing arena, including

international projects. The book considers the application of English and New York law in cross-border documentation and legal and practical matters associated with running financing projects in civil law jurisdictions. Different sources of funding are also examined, such as banking and international bond documentation, and Islamic financing practice, in particular the use of Murabaha financing techniques and Sukuk (Islamic bond) market. This includes the legal and documentation issues arising from the use of such financing techniques and how they interact with each other from a legal and contractual perspective. Equally significant, the book provides analysis of project defaults and work-outs giving guidance on how to manage projects when these circumstances

arise. The book also contains extensive coverage of dispute resolution in international projects. New to this edition is a chapter on development finance institutions covering the work of bodies such as the World Bank and the African Development Bank. This chapter explains the key roles played by these institutions in international project finance, especially in emerging markets. It covers the key policy issues and the impact of such policies on project finance documentation. As well as addressing the basic principles which affect the structuring and documentation of project financings, the book also explains structural, legal and contractual differences between the various sectors such as transportation, infrastructure/Public Private Partnerships, conventional,
