As a young man, John James Audubon, the renowned American woodsman and artist, had to make a choice between following his father's dreams for him and discovering his own special destiny. In this beautifully conceived book, Robert Burleigh imagines a conversation in which Audubon tells his father why he has chosen to forgo the ordinary life of a shop-keeper and instead live out in nature to develop his art and his relationship with the world. Illustrated not only with sumptuous images by Wendell Minor, but with actual drawings by Audubon himself, this book will appeal to his fans of all ages.

In the World Library of Educationalists series, international experts themselves compile career-long collections of what they judge to be their finest pieces – extracts from books, key articles, salient research findings, major theoretical and practical contributions – so the world can read them in a single manageable volume. Readers will be able to follow the themes and strands and see how their work contributes to the development of the field. This volume brings together articles, essays, poetry, and artwork from Jerome C. Harste's extensive career across the field of literacy studies. This book addresses his contributions to early literacy, reading comprehension, ways of knowing, inquiry-based education, and creating critical classrooms—among other topics—in his characteristically whimsical tone. Following the chronology of his career, each section of the book reflects an important theme of Harste's work and documents the impact of his contributions on the field. Combining his key articles with historical notes, fun facts, and professional tips, Harste tells stories about encounters with colleagues, and covers everything from seminars he developed and taught, the importance of collaboration, how his thinking and teaching have grown and evolved, ways his scholarship was enhanced through participation in professional organizations, as well as pithy words of advice for fellow scholars. The articles in this collection trace the development of a thought collective which Harste helped create and which continues to shape research and practice in the field of literacy education.

In the four pages committed to a discussion of myocardial infarction in the first edition of Harrison's Principles of Internal Medicine, published in 1950, there was no mention of use of the laboratory for management of patients. Thirty years later, when the first edition of Braunwald's Heart Disease, A Textbook of Cardiovascular Medicine was published, 2 out of the 1943 pages in the text contained a discussion of the laboratory examinations in acute myocardial infarction. Our knowledge base of the multitude of ways that physicians can and should use the clinical chemistry laboratory has expanded dramatically since these classic texts were published. The nomenclature has changed: terms such as "cardiac enzymes" have given way to "cardiac biomarkers." The number of assays has multiplied, and the operating characteristics of available assays are impr- ing at a gratifying but dizzying rate. We now use biomarkers to diagnose cardiovascular diseases and also to frame our treatment strategies. Thus, there is a clear need for a scholarly compilation of the state of the art of cardiac biomarkers. Dr. David Morrow has expertly edited an authoritative book that answers this need. The 34 chapters in Cardiovascular Biomarkers: Pathophysiology and Disease Mana- ment were written by a group of individuals who are internationally recognized thought leaders and experts in clinical and laboratory medicine.

Textbook of Pulmonary Vascular Diseases combines basic scientific knowledge on the pulmonary circulatory system at levels of the molecule, cell, tissue, and organ with clinical diagnosis and treatment of pulmonary vascular diseases. State-of-the-art techniques and their potential applications in research, diagnosis, and treatment of pulmonary vascular diseases are also covered.

The editors of Mast Cell Biology, Drs. Gillfillan and Metcalfe, have enlisted an outstanding group of investigators to discuss the emerging concepts in mast cell biology with respect to development of these cells, their homeostasis, their activation, as well as their roles in maintaining health on the one hand and on the other, their participation in disease.

Compression Machinery for Oil and Gas is the go-to source for all oil and gas compressors across the industry spectrum. Covering multiple topics from start to finish, this reference gives a complete guide to technology developments and their applications and implementation, including research trends. Including information on relevant standards and developments in subsea and downhole compression, this book aids engineers with a handy, single resource that will help them stay up-to-date on the compressors needed for today's oil and gas applications. Provides an overview of the latest technology, along with a detailed discussion of engineering Delivers on the efficiency, range and limit estimations for machines Pulls together multiple contributors to balance content from both academics and corporate research

Offers a current and comprehensive review of the pathophysiology, diagnosis, and treatment of pulmonary hypertension and venous thromboembolism. Discusses indepth the pharmacologic and non-pharmacologic therapies used in the treatment of pulmonary vascular disease -- including the benefits and risks of each -- allowing for more informed care decisions.

In Europe, as well as in other industrialized economies all over the world, employment relations have undergone profound transformations over the last decades. Large numbers of workers have been displaced, involuntarily employed part-time, or hired on temporary employment contracts. The increasing flexibility in the staffing of organizations is experienced, by many employees, as a threat to the continuation of their employment relationships. A growing body of research suggests that such job insecurity can be of fundamental importance from the occupational health perspective as well as the managerial, due to its effects on employees' work attitudes and well-being. This book addresses the nature of job insecurity and investigates its consequences for individuals, the organizations they work for, as well as their labor unions. It also examines whether factors associated with union membership help employees to cope with employment uncertainty. The book is based on a European project involving Belgium, Italy, the Netherlands, and Sweden. Both individuals and organizations alike are harmed by the increased insecurity that prevails in working life today. By identifying and explaining those factors which result in job insecurity, and examining how the experience affects individuals, organizations, and unions, the authors wish to expand the body of knowledge concerning job insecurity. Such knowledge can lead to a greater focus on this phenomenon within working life, and result in greater effort being put into understanding how preventative measures can be implemented in the future.

Constitutionalism beyond Liberalism bridges the gap between comparative constitutional law and constitutional theory. The volume uses the constitutional experience of countries in the global South - China, India, South Africa, Pakistan, Indonesia, and Malaysia - to transcend the liberal conceptions of constitutionalism that currently dominate contemporary comparative constitutional discourse. The alternative conceptions examined include political constitutionalism, societal constitutionalism, state-based (Rousseau-ian) conceptions of constitutionalism, and geopolitical conceptions of constitutionalism. Through these examinations, the volume seeks to expand our appreciation of the human possibilities of constitutionalism, exploring constitutionalism not merely as a restriction on the powers of government, but also as a creating collective political and social possibilities in diverse geographical and historical settings.
