the Hog Island Audubon Camp, Dr. Stephen W. Kress learned that puffins had nested on nearby islands until extirpated by hunters in the late 1800s. To right this environmental wrong, he resolved to bring puffins back to one such island—Eastern Egg Rock. Yet bringing the plan to reality meant convincing skeptics, finding resources, and inventing restoration methods at a time when many believed in “letting nature take its course.” Today, Project Puffin has restored more than 1,000 puffin pairs to three Maine islands. But even more exciting, techniques developed during the project have helped to restore rare and endangered seabirds worldwide. Further, reestablished puffins now serve as a window into the effects of climate change. The success of Dr. Kress's project offers hope that people can restore lost wildlife populations and the habitats that support them. The need for such inspiration has never been greater.

Some scientists and science educators believe that the most effective strategy for raising science literacy among future workers and voters is to focus on the youngest members of the public. The reviews in this publication were undertaken to increase public understanding and appreciation of the importance and promise of the methods of science in human progress. This publication is directed towards librarians, teachers, and parents who are concerned about science information and education for children 5 through 12 years of age and covers science and mathematics books, films, filmstrips, and videocassettes. These materials cover the life and physical sciences, mathematics, engineering and technology, medicine, and the social and behavioral sciences. A wide range

Audiovisual materials include such diverse topics as energy and resources, chemical interactions, meteorology, aquatic environments, zoological sciences, medicine, and engineering. The indexes list authors, titles and subjects, series titles, and distributors. Availability and cost information are provided in the annotations. (RT)

Kilvert's World of Wonders takes a fresh look at the Victorian era, one that does not turn away from the smoke stacks and crowded streets of popular imagining, but which sees them from the distance of the rural countryside. Though a countryman and lover of country ways, here the well know diarist is shown to be deeply stirred by what he saw as a society being changed and improved by science, technology, and by the liberal, enlightened ideas that were starting to circulate. The social changes seen by Kilvert resonated with the vision of progress that was imbued in him by his Victorian upbringing, and as a result his diaries can be seen as a response to these changes and not, as previous Kilvert scholarship suggests, as a simple record of country life. Toman's new work goes beyond the biographical and social realities of Kilvert's family by comparing them to almost twenty other middle-

class families in order to show common factors in the familial experience of a rapidly changing society. At the heart of this re-evaluation of Kilvert's life and times is the theme of Wonder, various aspects of which are explored throughout. Away from the rapidly growing urban centres the effects of industrialisation are seen in a surprisingly positive light by Francis Kilvert, a fervent Christian coming to terms with the encroachments that science, scepticism and secularism were making upon religious faith and yet seeing all around him a 'world of wonders'.

Photographs and text depict the many different kinds of birds, their similarities and differences, habitats, life cycles, and behavior.
