The DNA fiber between the two nucleosomes is called linker DNA. The length of linker DNA depends on the extent of packing. In the case of humans, it varies from 8 to 151 base pairs. Chromatin fibers. The next level in DNA packaging is chromatin fibers. The nucleosomes and the linker DNA resemble beads on a string.

DNA structure, showing the nucleotide bases cytosine (C), thymine (T), adenine (A), and guanine (G) linked to a backbone of alternating phosphate (P) and deoxyribose sugar (S) groups. Two sugar-phosphate chains are paired through hydrogen bonds between A and T and between G and C, thus forming the twin-stranded double helix of the DNA molecule.
