About the Book: Environmental Studies pertain to a systematic analysis of the natural and man-made world encompassing various scientific, economic, social and ethical aspects. Human impacts leading to large scale degradation of the environment have aroused global concern on environmental issues in the recent years. The apex court has hence, issued directive to impart environmental literacy to all. In this book the fundamental concepts of environmental studies have been introduced and analysed in a simple manner strictly as per the module syllabus designed by the U.G.C. for undergraduate courses in science, humanities, engineering, medicine, pharmacy, commerce, management and law. Besides the undergraduate students of all disciplines the book will also be useful for those appearing in various competitive exams since environmental issues now find a focus in most of such examinations. The contents of the book will be of interest to all educationists, planners and policy makers. Key features of the book include a simple and holistic approach with illustrations, tables and specific case

studies mainly in the Indian context. The basic terminologies have been defined in the text while introducing the topics and some useful terms mentioned in the text have been explained in the glossary for an easy grasp by students of all disciplines.

Research in learning and behavioral disabilities, employing a variety of methods and techniques, has provided information relevant to practitioners. This volume discusses, applies and evaluates different methodological approaches to learning and behavioral disorder research; and serves as a reference to educators, researchers, and others.

Web mining is the application of data mining strategies to excerpt learning from web information, i.e. web content, web structure, and web usage data. With the emergence of the web as the predominant and converging platform for communication, business and scholastic information dissemination, especially in the last five years, there are ever increasing research groups working on different aspects of web mining mainly in three directions. These are: mining of web content, web structure and web usage. In this context there are good number of frameworks and benchmarks related to the metrics of the websites which is certainly weighty for B2B, B2C and in general in any e-commerce paradigm. Owing to the popularity of this topic there are few books in the market, dealing more on such performance metrics and other related issues. This book, however, omits all such routine topics and lays more emphasis on the classification and clustering aspects of the websites in order to come out with the true perception of the websites in light of its usability. In nutshell, Web Mining: A Synergic Approach Resorting to Classifications and Clustering showcases an effective methodology for classification and clustering of web sites from their usability point of view. While the clustering and classification is accomplished by using an open source tool WEKA, the basic dataset for the selected websites has been emanated by using a free tool site-analyzer. As a case study, several commercial websites have been analyzed. The dataset preparation using site-analyzer and classification through WEKA by embedding different algorithms is one of the unique selling points of this book. This text projects a complete spectrum of web mining from its very inception through data mining and takes the reader up to the application level. Salient features of the book include: Literature review of research work in the area of web mining Business websites domain researched, and data collected using site-analyzer tool Accessibility, design, text, multimedia, and networking are assessed Datasets are filtered further by selecting vital attributes which are Search Engine Optimized for processing using the Weka attributed tool Dataset with labels have been classified using J48, RBFNetwork, NaïveBayes, and SMO techniques using Weka A comparative analysis of all classifiers is reported Commercial applications for improving website performance based on SEO is given

Computer science studies the theory, experimentation and engineering that is fundamental to the design, development and use of computers. It adopts a scientific approach to the systematic study of the acquisition, processing and communication of information. This is achieved by developing algorithms, computational methodologies and computational systems. Computer science branches into a number of theoretical and practical disciplines. Its applications are in diverse fields such as software engineering, artificial intelligence, graphics, data storage, networking and communication, etc. This book on computer science and technology describes in detail the fundamental theories associated with the subject while elucidating the modern advancements that are taking place across all branches of this field. It also sheds light on some of the unexplored aspects of computer science and the recent researches in this domain of study. The book is appropriate for students seeking detailed information in this area as well as for experts.

Higher Education in India: New Perceptions and Perspectives is meant for all those who are working in the field of higher education (HE) and for all those who care for HE in India today. It discusses the philosophy, the legacy, the crisis in HE and the efforts to overcome them. It reviews all the main reports of all the commissions and committees appointed to form HE policy and to reform the system in the context of globalization of HE. It also provides a review of NAAC efforts to enhance the quality of Indian HE Institutions. Theory and practice are combined in this book to make it up to date and practically very useful to all the stakeholders of HE in India. The book is clear in views, highly informative in its contents, lucid in its style and a recent comprehensive statement with clear 'perceptions' and 'perspectives' of the HE scenario in India today. It is the outcome of 50 years of continuous contemplation of the author. It is a critique of Indian HE in the context of national development and global knowledge society.

This book covers random signals and random processes along with estimation of probability density function, estimation of energy spectral density and power spectral density. The properties of random processes and signal modelling are discussed with basic communication theory estimation and detection. MATLAB simulations are included for each concept with output of the program with case studies and project ideas. The chapters progressively introduce and explain the concepts of random signals and cover multiple applications for signal processing. The book is designed to cater to a wide audience starting from the undergraduates (electronics, electrical, instrumentation, computer, and telecommunication engineering) to the researchers working in the pertinent fields. Key Features:

- Aimed at random signal processing with parametric signal processing-using appropriate segment size.
- Covers speech, image, medical images, EEG and ECG signal processing.
- Reviews optimal detection and estimation.
- Discusses parametric modeling and signal processing in transform domain.
- Includes MATLAB codes and relevant exercises, case studies and solved examples including multiple choice questions
