definition of congruence.

Once congruence is established, various congruence criteria (e.g., ASA, SSS, SAS) can be explored. Once similarity is established, various similarity criteria (e.g., AA) can be explored. These criteria, along with other postulates and definitions, provide a framework to be able to prove various geometric proofs. In this unit,

the measures of two angles is 90° , then the angles are complementary. In triangle ABC, $m\angle A = 25^\circ$, $m\angle B = 65^\circ$, $m\angle C = 90^\circ$. Which valid conclusion follows directly from the previous statements? A. $\angle A$ and $\angle C$ are complementary angles. B. $\angle B$ and $\angle C$ are complementary angles.
