Let the legs be  $a$  and  $b$  and the hypotenuse  $c$ , and arrange four replicas of the triangle in the corners of a square of side  $a + b$ , as shown on the right in Fig. 1.5. Then the area of the large square equals 4 times the area of the triangle plus the area of the small square; that is,  $(a + b)^2 = 4$

In the algebra preface of his book  
Precalculus Mathematics in a Nutshell,  
Professor George F. Simmons wrote  
that the New Math produced students  
who had "heard of the commutative  
law, but did not know the multiplication  
table." Selected publications. Some of  
his books are: Introduction to Topology
