The ICC/ASHRAE 700-2015 National Green Building Standard(TM) (NGBS) has been approved by the American National Standards Institute for all types of sustainable residential construction. A collaborative effort of the International Code Council, ASHRAE and the National Association of Home Builders, NGBS outlines a variety of green practices that can be incorporated into new homes and multifamily buildings, as well as hotels, dormitories and land developments. The Standard also delivers stand-alone chapters for both home remodeling and additions and renovations of multifamily buildings. The green practices address site and lot design, preparation and development; resource, energy and water efficiency; indoor environmental quality; and operation, maintenance and building owner education. Four levels--Bronze, Silver, Gold and Emerald--enable residential professionals to integrate sustainability and high performance at a level most appropriate for their businesses and specific housing markets. Changes for the 2015 Edition The 2015 edition incorporates changes that better align the NGBS with the I-codes, expands the

application of innovative practices and builds upon years of building and certifying to NGBS. Some of the more notable updates include: - Substantial revisions to the Energy Efficiency chapter, which now has more stringent rating levels based upon whole-house energy savings that are above the 2015 International Energy Conservation Code. - A comprehensive update of the exterior and interior lighting provisions including common areas in multifamily building. - Mandatory installation of carbon monoxide alarms for all buildings, regardless of level of certification or local code. - Revamped stormwater management options that encourage low-impact development practices. - Greater emphasis on and recognition of multi-modal transportation options including bicycle parking, pedestrian connectivity, proximity to transit and electric-vehicle charging. - New references in the Resource Efficiency chapter for Environmental Product Declarations for both specific and industry-wide products. This latest edition includes everything needed to design, construct or remodel any residential project to the most current sustainable and green building criteria available - all under one roof!

Scratch is a fun, free, beginner-friendly programming environment where you connect blocks of code to build programs. While most famously used to introduce kids to programming, Scratch can make computer

science approachable for people of any age. Rather than type countless lines of code in a cryptic programming language, why not use colorful command blocks and cartoon sprites to create powerful scripts? In *Learn to Program with Scratch*, author Majed Marji uses Scratch to explain the concepts essential to solving real-world programming problems. The labeled, color-coded blocks plainly show each logical step in a given script, and with a single click, you can even test any part of your script to check your logic. You'll learn how to:

- Harness the power of repeat loops and recursion
- Use if/else statements and logical operators to make decisions
- Store data in variables and lists to use later in your program
- Read, store, and manipulate user input
- Implement key computer science algorithms like a linear search and bubble sort

Hands-on projects will challenge you to create an Ohm's law simulator, draw intricate patterns, program sprites to mimic line-following robots, create arcade-style games, and more! Each chapter is packed with detailed explanations, annotated illustrations, guided examples, lots of color, and plenty of exercises to help the lessons stick. *Learn to Program with Scratch* is the perfect place to start your computer science journey, painlessly. The CPC exam is comprised of 150 multiple-choice questions. The test takes five hours and 40 minutes to complete, making it fairly

rigorous. There are two breaks in the middle of the test. The CPC exam costs \$300 to take, but only \$260 if the test-taker is a member of the AAPC (annual dues are \$125 for individuals and \$70 for students). The CPC exam thoroughly tests a coder's grasp of the entire coding process, from medical terminology to code sets and beyond. Per the AAPC's website, the CPC exam covers 24 subject areas, including anesthesia, radiology, and medicine. You should recognize a number of these (like Evaluation and Management, or Radiology) as sections of the CPT code manual. Others, like Anatomy and Physiology, are parts of the coder's everyday skill set. You should note that the questions on the exam are not divided or identified by the topic they are related to. That is, questions on the CPC exam will test you on all of the above 24 fields of medical coding, but they won't outright say, "This is an anesthesia question." Instead they'll just ask you about anesthesia, or surgery, or human anatomy. During the test, you'll be presented with a number of tests cases pertaining to the practice of coding. These test case questions will present you with a condensed medical report and ask you to select the correct set of codes from the answers below. For instance, a test case question might read: "Sarah, a 45-year-old patient, visits the doctor and presents symptoms including a sore throat, swollen lymph nodes, and a fever. After performing a

# Read PDF Smartphone A101 Instructions Manual

rapid strep test, the doctor confirms a diagnosis of streptococcal sore throat. The doctor prescribes an Amoxicillin as an antibiotic. Which of the following are the correct codes for this diagnosis, procedure and prescription?"There are also general knowledge questions, like "Which types of joints are synovial?" that don't have an attached test case. That question's related to the musculoskeletal system, but the test won't come right out and say so. You'll have to rely on your knowledge of code sets, medical terminology, best practices, and the coding process in general to pass. Individuals who earn a score of 70 percent or better (105 correct questions) will pass the CPC exam. If you fail your first test, you are allowed one free retake. GETTING CERTIFIED Once you pass the CPC exam, you are not officially certified by the AAPC until you fulfill a few other criteria. In order to complete a CPC certification, you must become a member of the AAPC. Certification is also limited to coders with two years of professional experience or those willing to complete an apprentice program. As such, the CPC exam is recommended for individuals who have already started their coding career. That won't prevent us from going over the basics of this important exam.
