These inverters form the basis of a hybrid solar PV energy system. During times when surplus energy is generated, the hybrid solar system offers the option of selling excess electricity back to the grid or storing the renewable energy in a battery. The solar storage battery can then provide power. This will require the hybrid inverter and battery to be installed with the necessary software and changeover switches.

Here is a list of the PV system basics: Panels: PV panels, which cost anywhere from \$2.40 per watt to over \$5 per watt, are the single biggest expense of a PV system. Their placement and mounting affect your system performance more than any other facet of the job. Mounting equipment: Mounting your PV panels is of critical importance. First, you need to mount the panels where they'll get maximum sunshine over the course of a year.
