The second edition of Ads to Icons examines current and future trends in advertising. Through 50 updated international case studies of new and iconic advertising campaigns, author Paul Springer identifies why they were successful and analyses their contribution to the continued development of advertising. New digital formats analysed include Google's AdSense and AdWords, which reworked their search facility as a revenue-generating advertising service. The growing potential of the Internet as an advertising vehicle is illustrated. This updated new edition includes an online campaign entitled Non Stop Fernando, a campaign that exploits the potential of online film. It also features the new Nike+ case study, which details Nike's third party association with Apple iPod through Nike+ and brought together Apple's digital know-how and music expertise with Nike's industry sector experience. The author shows how traditional media have been revitalised by the adoption of revolutionary approaches to their use, making the resulting adverts more creative and impactful than before. Other campaigns have extended beyond conventional formats, including the first personal SMS text messaging campaign for Cadbury chocolate and Levi's creation of a brand character, Flat Eric, to drive viral communication before the television commercials aired. This seminal study explores the significant changes in the global IT industry as production has shifted from the developed world to massive sites in the developing world that house hundreds of thousands of workers in appalling low-wage conditions to minimize labor costs. The authors trace the development of the new networks of globalized mass production in the IT industry and the reorganization of work since the 1990s, capturing the systemic nature of an industry-wide restructuring of production and work in the global context. Their wide-ranging and detailed analysis takes the debates on the globalization of production beyond narrow perspectives of determining criteria of " success " for participation in global networks. Rather, they emphasize the changing nature of work, employment relations, and labor policies and their implications for the possibilities of sustainable economic and social development.
