Here's a first steps guide to investing in a stereo amp. If you're piecing together your first hi-fi stack, you're probably well aware by now that you're going to need an amplifier in your system. It's an essential unit that acts as the 'muscle' of your system. Whatever you're using to listen to your music, it's connected to the amplifier which then powers the speakers and controls the volume.

This remains true despite the fact that amplifiers are almost as crucial to the tone and overall presentation of your audio as your speakers are. Yes, though that innocuous metal box might look similar to other amplifiers in the showroom, it will produce a unique sound profile and, through its technical specifications, support some – but not all – of the speakers available to you.

A Beginners Guide To Matching Speakers and Amplifiers

Built in a tiny chassis, spanning 40x100x100 that you could easily hold in your hand, the Stereo Box S still manages to pump out 25W of power. It's not the best sounding amp at high levels, but at a reasonable volume this little amp has a lot to offer with excellent focus. Great for those people with little space to spare. If you're a total newbie to the world of car audio systems, then there's just one key fact that you should be aware of. It isn't some byzantine formula that's used to calculate speaker power levels or optimal speaker placements. It doesn't have anything to do with squeezing every last bit out of a car audio capacitor or adding an additional battery.
