How the rise of China will bring on a new global power struggle The answers to these questions are not only available, but contained within these pages. The Extreme Future is the forecasting handbook for the twenty-first century.

A New Statesman best book of the year | New York Times Editors' Choice pick A Financial Times best economics book of 2019 An accessible, story-driven look at the future of the global economy, written by a leading expert To predict our future, we must look to the extremes. So argues the economist Richard Davies, who takes readers to the margins of the modern economy and beyond in his globe-trotting book. From a prison in rural Louisiana where inmates purchase drugs with prepaid cash cards to the poorest major city on earth, where residents buy clean water in plastic bags, from the world's first digital state to a prefecture in Japan whose population is the oldest in the world, how these extreme economies function—most often well outside any official oversight—offers a glimpse of the forces that underlie human resilience, drive societies to failure, and will come to shape our collective future. While the people who inhabit these places have long been dismissed or ignored, Extreme Economies revives a foundational idea from medical science to turn the logic of modern economics on its head, arguing that the outlier economies are the place to learn about our own future. Whether following Punjabi migrants through the lawless Panamanian jungle or visiting a day-care for the elderly modeled after a casino, Davies brings a storyteller's eye to places where the economy has been destroyed, distorted, and even turbocharged. In adapting to circumstances that would be unimaginable to most of us, the people he encounters along the way have helped to pioneer the economic infrastructure of the future. At once personal and keenly analytical, Extreme Economies is an epic travelogue for the age of global turbulence, shedding light on today's most pressing economic questions.

Game-changing trends are coming in business, technology, workforce, economy, security, and environment. Climate change, energy demand, and population growth will redefine global risk and power. Exponential new technologies will emerge in digital money, mobile commerce, and big data. An explosive new middle class of over one billion consumers will enter the marketplace. Every nation, job, business, and person will be transformed. To thrive in this future you have to become predictive, adaptive, and agile—to become Future Smart. Dr. James Canton, a renowned global futurist and visionary business advisor, illuminates the pivotal forces and global power shifts that everyone must understand today to thrive in a rapidly changing landscape: Regenerative medicine will extend our lifetimes and rebuild our bodies Robots and drones will drive our cars, teach our kids, and fight our wars Smart machines will design, manage, and service 40% of all global businesses—energy, commerce, finance, and manufacturing—without humans Digital consumers who live always connected will challenge every business to change its strategy Climate change wars will redefine security and resources Most of us are not prepared to meet the challenges the future will bring, but these changes are coming fast. Armed with knowledge, those who are Future Smart can take action to reinvent themselves, their businesses, and their world.

"The ongoing COVID-19 pandemic marks the most significant, singular global disruption since World War II, with health, economic, political, and security implications that will ripple for years to come." -Global Trends 2040 (2021) Global Trends 2040-A More Contested World (2021), released by the US National Intelligence Council, is the latest report in its series of reports starting in 1997 about megatrends and the world's future. This report, strongly influenced by the COVID-19 pandemic, paints a bleak picture of the future and describes a contested, fragmented and turbulent world. It specifically discusses the four main trends that will shape tomorrow's world: - Demographics-by 2040, 1.4 billion people will be added mostly in Africa and South Asia. - Economics-increased government debt and concentrated economic power will escalate problems for the poor and middleclass. - Climate-a hotter world will increase water, food, and health insecurity. - Technology-the emergence of new technologies could both solve and cause problems for human life. Students of trends, policymakers, entrepreneurs, academics, journalists and anyone eager for a glimpse into the next decades, will find this report, with colored graphs, essential reading.

Unscaled identifies the forces that are reshaping the global economy and turning one of the fundamental laws of business and society—the economies of scale—on its head. An innovative trend combining technology with economics is unraveling behemoth industries—including corporations, banks, farms, media conglomerates, energy systems, governments, and schools—that have long dominated business and society. Size and scale have become a liability. A new generation of upstarts is using artificial intelligence to automate tasks that once required expensive investment, and "renting" technology platforms to build businesses for hyper-focused markets, enabling them to grow big without the bloat of giant organizations. In Unscaled, venture capitalist Hemant Taneja explains how the unscaled phenomenon allowed Warby Parker to cheaply and easily start a small company, build a better product, and become a global competitor in no time, upending entrenched eyewear giant Luxottica. It similarly enabled Stripe to take on established payment processors throughout the world, and Livongo to help diabetics control their disease while simultaneously cutting the cost of treatment. The unscaled economy is remaking massive, deeply rooted industries and opening up fantastic possibilities for entrepreneurs, imaginative companies, and resourceful individuals. It can be the model for solving some of the world's greatest problems, including climate change and soaring health-care costs, but will also unleash new challenges that today's leaders must address.

"Ten Global Trends Every Smart Person Should Know is a pleasure: gorgeous, self-contained vignettes on human progress, which you can sample at your leisure or devour in a sitting." —Steven Pinker, author of Enlightenment Now: The Case for Reason, Science, Humanism, and Progress Think the world is getting worse? If so, you're wrong. The world is, for the most part, actually getting better. But 58 percent of people in 17 countries who were surveyed in 2016 thought that the world was either getting worse or staying the same. Americans were even more glum: 65 percent thought the world was getting worse and only 6 percent thought it was getting better. The uncontroversial data on major global trends in this book will persuade you that this dark view of the state of humanity and the natural world is, in large part, badly mistaken. World population will peak at 8-9 billion before the end of this century, as the global fertility rate continues its fall from 6 children per woman in 1960 to the current rate of 2.4. The global absolute poverty rate has fallen from 42 percent in 1981 to 8.6 percent today. Satellite data show that forest area has been expanding since 1982. Natural resources are becoming ever cheaper and more abundant. Since 1900, the average life expectancy has more than doubled, reaching more than 72 years globally. Of course, major concerns such as climate change, marine plastic pollution, and declining wildlife populations are still with us, but many of these problems are already being ameliorated as a result of the favorable economic, social, and technological trends that are documented in this book. You can't fix what is wrong in the world if you don't know what's actually happening. Ten Global Trends Every Smart Person Should Know will provide busy people with quick-to-read, easily understandable, and entertaining access to surprising facts that they need to know about how the world is really faring.

Where will Muslim societies be tomorrow? The world is increasingly and constantly changing, making it hard to keep up. This makes the state much more dire and troublesome for those already marginalised – particularly Muslim societies. Normal is no longer capable of upholding the promise of tomorrow's certainty. These are postnormal times. In this storm of ignorance and uncertainty, Muslim societies stand to lose the most. But this is not destiny. In the cultivation of a new type of literacy – futures literacy – there resides a hope. Muslim Societies in Postnormal Times offers an alternative where we can 'rescue' and decolonise our futures. Sardar, Serra, and Jordan take an open and plural approach to the future revealing the true potentials that lie before us. Through detailed analysis of contemporary trends, the road to destruction is revealed. Through identifying and exploring emerging issues, agency through options can allow for positive change. And in the extrapolation of these ideas into scenarios, the authors pave the way for us to navigate our own preferred futures. Their study challenges the reader to think about the future in a new way, redefining the monolithic future as three tomorrows (Extended Present, Familiar Futures, and Unthought Futures), along the way ever watchful for Black Swans, Black Elephants, and the illustrious Black Jellyfish that could disrupt the path ahead. The authors pull no punches in critically evaluating the possibilities and nightmares that could potentially befall Muslim societies. Through a display of creativity and imagination, this book looks beyond the conventional to illuminate impacts in the context of the complex, interconnected world we find ourselves in. This informative and enlightening text will push readers to see beyond popular, yet native notions of present and future. In the exposition of the reader's ignorance and uncertainty, they will begin to look for the unthought and take agency in recolonising and navigating their preferred tomorrow.
