In The Parrot's Lament, noted environmentalist Eugene Linden offers more than one hundred true anecdotes about animal acts of cooperation, heroism, escape—even tales of deception or manipulation of human beings. Drawing on the first-person experiences of veterinarians, field biologists, researchers, and trainers, Linden has compiled a warmly entertaining and powerfully persuasive argument for animal consciousness that, while not human, far exceeds what humans usually grant animals.

The recognition of animal pain and stress, once controversial, is now acknowledged by legislation in many countries, but there is no formal recognition of animals' ability to feel pleasure. Pleasurable Kingdom is the first book for lay-readers to present new evidence that animals--like humans--enjoy themselves. It debunks the popular perception that life for most is a continuous, grim struggle for survival and the avoidance of pain. Instead it suggests that creatures from birds to baboons feel good thanks to play, sex, touch, food, anticipation, comfort, aesthetics, and more. Combining rigorous evidence, elegant argument and amusing anecdotes, leading animal behavior researcher Jonathan Balcombe proposes that the possibility of positive feelings in creatures other than humans has important ethical ramifications for both science and society.

As Charles Darwin suggested more than a century ago, the differences between animals and humans are "of degree and not of kind." Not long ago, ethologists denied that animals had emotions or true intelligence. Now, we know that rats laugh when tickled, magpies mourn as they cover the departed with greenery, female whales travel thousands of miles for annual reunions with their gal pals, seals navigate by the stars, bears hum when happy, and crows slide down snowy rooftops for fun. In engaging text, photographs, and infographics, Inside Animal Hearts and Minds showcases fascinating and heart-warming examples of animal emotion and cognition that will foster wonder and empathy. Learn about an orangutan who does "sacramé," monkeys that understand the concept of money, and rats that choose friendship over food. Even language, math, and logic are no longer exclusive to humans. Prairie dogs have their own complex vocabularies to describe human intruders, parrots name their chicks, sea lions appear capable of deductive thinking akin to a ten-year-old child's, and bears, lemurs, parrots, and other animals demonstrate numerical cognition. In a world where a growing body of scientific research is closing the gap between the human and non-human, Inside Animal Hearts and Minds invites us to change the way we view animals, the world, and our place in it.

This collection of 40 psalm-poems includes praises and laments as well as psalms of creation, psalms of ascent, and a black-and-white reproduction of the medieval Psalter Msp. A study guide for small groups seeking to relate their poetry reading to scripture and their spiritual lives follows the main text. Enjoy!

The acclaimed author's memoir of life with an African grey parrot offers "a thoughtful and generous celebration of minds and bodies different from our own" (Times Literary Supplement, UK). For thirty years, Brian Brett shared his office and his life with Tuco, a remarkable parrot given to asking questions such as "Whaddya know?" and announcing "Party time!" when guests showed up at Brett's farm. Although Brett bought Tuco on a whim, he gradually realized the enormous obligation he has to his pet, learning that the parrot is far more complex than he thought. In Tuco and the Scattershot World, Brett not only chronicles his fascinating relationship with Tuco, but uses it to explore the human tendency to "other" the world, abusing birds, landscapes, and each other. Brett sees in Tuco's otherness a mirror of his own experience contending with Kallman syndrome, a rare genetic condition that made him the target of bullies--and nurtured his affinity for winged creatures. Brett's meditative digressions touch on topics ranging from the history of birds and dinosaurs to our concepts of knowledge, language, and intelligence--and include commentary from Tuco himself. By turns provocative and deeply moving, Tuco and the Scattershot World "is not a straight memoir--it's something much more wondrously weird . . . a view of the human predicament that is hilarious, sobering and profound" (Globe & Mail, UK).

With their love and companionship, animals of all species help to make human lives better every day. But sometimes, to our utter amazement and everlasting gratitude, animals literally save our lives. This heartwarming book collects over 50 real-life stories in which the actions of animals have meant the difference between life and death. Today, scientists vigorously debate questions regarding the sentience, intelligence, and emotions of animals. In particular, they want to know whether animals share with humans the highest emotions of empathy, compassion, and altruism. Daisy to the Rescue poses these questions for readers to consider, and examines these extreme life-saving situations for possible evidence. Gathered together, these stories make a compelling case for the presence of altruism in animals. Daisy to the Rescue provides dramatic, thrilling, and moving stories that convey a hopeful message about our world. But these stories also provide startling evidence of the mental and emotional capacities of animals, those beings we share the world with.
