A textbook that presents traditional management concepts, important current management issues, and insights regarding how students should handle both to ensure organizational success. The text is divided into six sections: introduction to management; planning; organizing; influencing; controlling; a

This book provides a comprehensive, flexible approach to the basic skills of business management with an emphasis on skills and applications. It presents traditional concepts, important contemporary issues, and timeless insights into applying management know-how – all toward the goal of achieving organizational success. Built around the concept of “ Core Plus ” - a core of chapters covered in most courses, surrounded by a rich selection of optional chapters - enabling flexibility in the way the text is used. Management History, Operations Management, Information Technology in Management, and Creativity and Innovation in Management. For managers at all levels.

This book identifies a major problem facing developing nations and the countries and sources that fund them: the lack of attention and/or effective strategies available to prevent farmers in underdeveloped and poorly endowed regions from sinking still deeper into poverty while avoiding further degradation of marginal environments. The contributors propose an alliance of scientific knowledge with native skill as the best way to proceed, arguing that folk systems can often provide effective management solutions that are not only locally effective, but which may have the potential for spatial diffusion. While this has been said before, the volume makes one of the best articulated statements of how to implement such an approach.

In one modest-sized volume, this book offers three valuable sets of knowledge. First, it provides best practice guidance on virtually every large-scale task a modern manager may be involved in—from recruiting and hiring to onboarding and leading teams, and from employee engagement and retention to performance management and working with difficult employees. Second, it explains the essential concepts and practice of a range of effective leadership styles—including (but not limited to) servant leadership, crisis leadership, change agent leadership, and diversity and inclusion leadership. Third, it offers brief case studies from select CISOs and CSOs on how these management and leadership principles and practices play out in real-life workplace situations. The best practice essentials provided throughout this volume will empower aspiring leaders and also enable experienced managers to take their leadership to the next level. Many if not most CISOs and other leaders have had very little, if any, formal training in management and leadership. The select few that have such training usually obtained it through academic courses that take a theoretical, broad brush approach. In contrast, this book provides much actionable guidance in the nitty-gritty tasks that managers must do every day. Lack of management practical knowledge puts CISOs and CSOs at a disadvantage vis-a-vis other executives in the C-suite. They risk being pigeonholed as “ security cops ” rather than respected business leaders. Many articles on these subjects published in the press are too incomplete and filled with bad information. And combing through the few high-quality sources that are out there, such as Harvard Business Publishing, can take hundreds of dollars in magazine subscription and book purchase fees and weeks or months of reading time. This book puts all the essential information into your hands through a series of concise chapters authored by an award-winning writer.

The basic objective of the book is to assist an executive/manager and an administrator to perform more effectively in their job. So the book is designed to accomplish by presenting the most effective concepts, principles and techniques in current use. And it does so, not from the viewpoint of anyone specialist-behavioural scientist, medical practitioner, operation researcher or computer expert-rather, it integrates pertinent findings from the relevant fields of biology and genetics, behavioural and managerial sciences. This book outlines specific techniques which will enable the managers/executives to apply what they learn in their own jobs. These techniques are supported by step-by-step, day-to-day approach which will enable them to strengthen their relationship not only with their superiors, but with their subordinates and peers as well.

This book is a collection of ten articles investigating the relationship between Chinese wisdom and the practice of modern management. The prefatory article contributed by Master Xuecheng, the President of the Buddhist Association of China, presents the utilisation of Buddha ' s wisdom in the management of the modern world and human society. The six articles in Part One look into the managerial wisdom contained in the main schools of Chinese philosophy, including Confucianism, Buddhism, Taoism, Legalism and Militarism, and explores their application and inspiration to the management of business, human resources, and monasteries. The three essays in Part Two focus on managerial wisdom derived from historical books and great Chinese historical figures. This endeavour in rediscovering the modern application and values of Chinese wisdom hidden within traditional Chinese culture and philosophy provides the study of modern management rooted in Western culture with fresh ideas and oriental perspectives. This book is an essential resource for undergraduates, postgraduates, researchers and practitioners working in the areas of business management, human resources, intercultural communication and Chinese studies.

This book brings together perspectives from economics, specifically minerals economics, to the management of global mining companies. It covers volatile price forecasting, cost analysis, investment decisions, and the social, environmental, and developmental impacts of mining.

The management of any modern organisation involves data, but the volume of information has become almost impossible for even the most up-to-date computer system to handle. Fortunately, big-data technologies are now enabling new ways of dealing with the flood of information, making an approximate solution possible in a reasonable time-frame, as an alternative to waiting for an exact result taking much longer. This book contains the 17 papers presented at the inaugural conference of the new series: Modern Management based on Big Data (MMBD 2020). The conference was originally scheduled to be held in Beijing, China, but due to measures to prevent the spread of the COVID-19 pandemic, the conference was held online from 18-21 October 2020. As its name suggests, the conference covers the connected aspects of Big Data and Modern Management, and the 17 papers included here, accepted from a total of 68 submissions, cover topics including data capture and storage; search, sharing and analytics; data visualization; machine learning algorithms for big data, distributed file systems and databases; management strategy and decision making; manufacturing and logistics systems; total quality management, management information systems; human factor engineering; and human resources. Providing an overview of current developments in modern management based on Big Data, the book will be of interest to all those working in the field.

History has proven that the most dynamic and creative management theories often arise in the fast-growing economies. With the rapid development of China's economy, Chinese management styles have attracted more and more attention from management scholars and practitioners around the world. Derived from 40 years of theoretical research, Eastern Management is the crystallisation of 2,000 years of Chinese thought, theory and experience. It integrates Western and Eastern management styles and highlights the role of human nature in management. Above all, it holds that the guiding principles of Chinese management are putting people first, regarding morality as priority and conducting oneself to serve others. This book views management as a system with multiple micro, meso and macro levels, namely personal management, family governance, business governance and state governance. Through adopting multiple perspectives, multi-level analysis and syncretic theoretical approaches, this book aims to help people gain a deeper understanding of the commitment of Eastern and Chinese management communities to the harmony between humans and nature, individuals and society, and to people in general, as a means to gradually improve the conditions of human existence.
