An interest rate swap is a contract between two parties to exchange all future interest rate payments forthcoming from a bond or loan. It's between corporations, banks, or investors. Swaps are derivative contracts. The value of the swap is derived from the underlying value of the two streams of interest payments.

Interest Rate Swap: Definition, Example, Valuation

What is an Interest Rate Swap? An interest rate swap is a forward contract in which one stream of future interest payments is exchanged for another based on a specified principal amount.

So in period 2, now LIBOR changes to 4% and so A will have to pay 4% + the 2% on its loan which is 6% or \$60,000. A will have to pay \$60,000 to its lender. It would have to pay B the 70,000 still, it would pay to B 70,000 but in exchange it would get LIBOR + 1% from B. LIBOR is 4%. 4% + 1% is 5%. It would get \$50,000.

Understanding Interest Rate Swap Math Pricing

In a nutshell, interest rate swap can be said to be a contractual agreement between two parties to exchange interest payments. The most common type of interest rate swap arrangement is one in which Party A agrees to make payments to Party B based on the fixed interest rate, and Party B agrees to pay party A based on the floating interest rate.
